

Demand for Low Code is Up... but Resources are Down... We Have to Get Low Code Right...

According to Gartner, 80% of technology products and services will be built outside of IT by 2024.

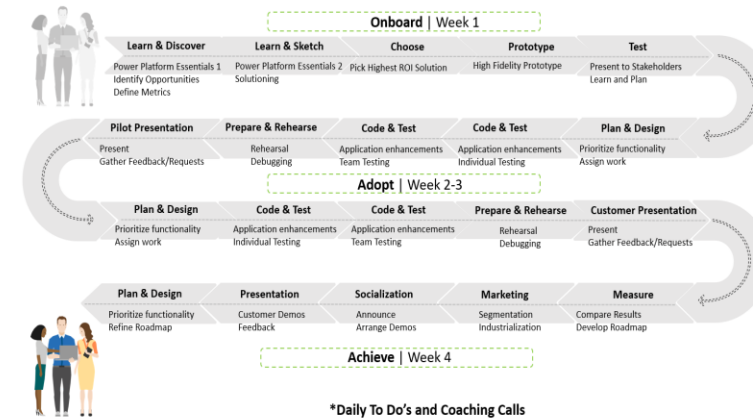

Customers accelerating needs for experiences, insights and outcomes from companies who already are resource crunched – have created **overwhelmed employees**. And the monolithic systems in place aren't helping. The convergence of these factors is driving a massive need edge experiences and **for Low Code Development**.

We have all heard it – Low Code Platforms like **Power Platform** can help your users with a better more **connected, contextual** experience and your IT team to go faster, plus extend the life of your line of business solutions. We need to bring the Business and IT together to figure out how to drive low code solutions now. Where do we start?

30 Day Low Code Challenge with the Power Platform and Artificial Intelligence

Framework to Amplify Customer and Employee Experience with Citizen Developers using the Power Platform and AI With Technology You Already Own

What to Expect | The Journey

Week One | Onboard

Initial 5 Day design thinking sprint focused on identifying and solving for one key challenge.

Weeks Two -Three | Adopt & Optimize

Assisted build sprint, Think aloud testing and deploy for user adoption. Daily coaching calls

Week Four | Achieve

Plan to Develop Train and Deploy solutions to your people. Plan for **10 X outcomes - guaranteed**

We did an app in a day with a big partner, and it went nowhere after they left...

We need to innovate from the edge!

Why Can't I find a Power Apps Architect Without a Big Project?

Information Technology

We tried low code before, but it got out of hand and we still are dealing with the mess

We Don't Have Enough People!

Do we need a Center of Excellence?

Business

Our users complain that they get to use apps at home, but work is totally different

Makers

Our spreadsheets help us get stuff done but aren't connected and don't scale

The consultants that did my large project moved on to the next project

What Clients are Saying about the 30 Day Get Low Code Right Challenge

"After we moved from Salesforce – we stalled....Our first 365 partner had a rigid big forms over data approach which yielded poor adoption. CongruentX was agile and in 30 days we presented a Low Code solution to our sales team and their conference

David
CIO, US Lumber

"Our former partner had a much too technical approach that drove a hard to use system. CongruentX used low code, agility and a focus on users to drive exactly what our team needed via exactly the engagement model we were looking for"

Holly
VP, Marketing
